- The future
- Summary
Traditional Role of the Intermediary

Subscription Agent - The original intermediaries

- Admin services for publishers and libraries
- Consolidated orders, invoicing, payments
- Business model based on commission from publishers and (sometimes offering) discounts to libraries relating to volume/value.
- Administration for both parties built out of economies of scale
Fewer companies in this space

There are a limited number of companies in this space

General Suppliers: Swets, Ebsco, Prenax, LM Information

• Low margin business

• High overheads (mainly publisher and customer relations)

• Gradual decline in market size

There are some specialists suppliers offering a focussed service
Some subject areas have specialist suppliers

- Most common in Law and Business
- These often offer a full service
  - Books, Looseleafs, law reports and Journal subscriptions
  - Notification services of new editions of books
  - Central London 2 hour delivery service
  - Often provide a service to libraries and others (in Law they might also offer a direct service to barristers)
  - There is still a lot of paper resources out there!
New services had to be developed when Electronic Journals first arrived to provide
- online purchasing or e-procurement
- online access to subscribed-to journal content through a single interface
- Some Agents failed to deliver these new services and either were sold or merged
- At the same time a whole new breed of intermediaries was born..
With Electronic Journals bigger publishers tended to build their own platform, but many looked to place their electronic journals in a shared platform

- Jstor
- Highwire
- Ingenta

These provided some advantages to the librarian – one place to go/interface to learn and one admin tool. There were/are also some disadvantages...
Aggregators

- Proquest, Ebsco, Cengage / Gale
- Subject specialists like Ovid

What do they do - Transform published e-content from various sources to create a new product / dataset available via a single platform

Why are they needed?
- Simplifies purchasing and access admin
- Provides added value
- A more affordable alternative to e-journals (but often with an embargo)
- Subject focussed
- Broadens the market
Intermediary book suppliers

- Book suppliers (Dawsons, Coutts etc.)
  - Offer online order systems
  - Book servicing
  - Marc records
  - Out of print books
  - Ebook platforms
It all started out with giving out user names and passwords and then IP Access. Then various other options – all provided by intermediaries..

- Athens
- Shibboleth (Federated Access)
- Ezproxy
Other intermediary services

- Discovery
  - Summon, EDS, Primo etc..
- Analytical tools and services
- Usage statistics
- Link resolvers
- Negotiation and licensing
- Marketing and promotional services for publishers
- Hosting services for publishers
• Aren’t intermediaries meant to make it easier!

• So many different places to go, resources to manage, links to be maintained, statistics to gather, access rights, how to access, costs, subscription dates

• Wouldn’t it be great to keep this all in one place (like a big digital filing cabinet)
• Our friendly intermediaries thought so to – so they invented the Knowledge Base

• There are many versions of the Knowledge base, including the Jisc Collections version, KB+

• KB+ is more then just an online service. The data that is collected is made available to other vendors and librarians to populate their own systems

• Working in association with GOKb to provide a freely available knowledge base of data that describes electronic journals and books offered by academic publishers.
Is Jisc Collections an intermediary?

- Analytical tools and services (usage data etc.)
  - JUSP
  - KB+
- Negotiation and licensing
- Online order
- Subscription management
- APC management
- Platforms for Historic Texts, Journals and Media
What is the future?

• Many of the services are low margin = less companies doing more things
  • Proquest and Ebsco have both been very active in the acquisition of other companies (Netlibrary, EBL, ebrary, Dialog, Cinahl etc.)

• Just last year a major intermediary filed for Bankruptcy protection in the US.

• Likely to see new innovations – this year the big thing has been APC management. Most likely the big players have something up their sleeves!
If you are working in a library you may well be working with at least one of these intermediaries, if not several.

They do provide a variety of useful services, and some of the services duplicate free services from organisations like Jisc.

It can be quite a big job to change intermediary – especially if they provide a lot of services – approach with caution.

Remember – they are there to work for you – that is what you pay them for...
